

## 8.33 kHz Ground Station and Airfield conversions

Throughout 2018 ground services will be converting to 8.33 kHz. The conversion date will be decided by each individual ground station. Airspace users are strongly advised to ensure they use up to date and accurate information before flying and follow any instructions given by units. Once any ground station or service on your planned flight converts to an 8.33 kHz channel, you must only communicate using an 8.33 kHz capable radio.

This is only a selection of changes aimed at Wellesbourne pilots flying locally, there are many other changes right across the UK, please check official AIP Supplements before flying

Location	Service	25 kHz	8.33kHz	Indicated Conversion Date
<b>BIRMINGHAM</b>	APP	118.050	123.980	01/05/2018
